OUR GOAL
Becoming a forerunner region in Sustainable Lifestyles and Green Economies

OUR ACTIONS
Spreading sustainable consumption and production methods and initiating corporate social responsibility in small and medium sized enterprises
Sharing knowledge and best practices in green public procurement
Creating environments for youth culture and sustainable lifestyles as well as supporting youth entrepreneurship
IT’S TIME to throw away throwaway-culture! Many more steps need to be taken so that future generations won’t be harmed by today’s unsustainable consumption and production patterns. By integrating economic, environmental and social aspects into the overall consumption and production framework we can create better solutions and make a difference.

We target small and medium sized enterprises as important actors for sustainable production and Corporate Social Responsibility. By developing initiatives in these fields, we create both new business opportunities and competitive advantages in a greener economy. We put special emphasis on public authorities, who as large buyers of goods and services are key players in the shift towards sustainable production and consumption. We also specifically target youth groups and organisations to initiate actions aimed at empowering youth and promoting sustainable lifestyles.

GET INVOLVED!

We have ties to many of the institutions, organisations and people needed to achieve change in sustainable development. We are always open for new cooperation partners.

There are two main ways of working with Baltic 21. An organisation can either become a member of the Baltic 21 Expert Group, a reference group that guides all of our activities. Or an organisation can become a project partner in one of our future projects.

Do you have an idea for a project that falls within one of our focus areas? We are always open for new ideas on sustainability. And anyone is welcome to plant an idea in our green house. Get in touch!
